What the Label Doesn’t Tell You

BY MICHAEL F. JACOBSON & BRUCE SILVERGLADE

It has been nearly 20 years since the government overhauled food labels. Since then, companies have come up with new schemes to trick consumers. And some older problems were never fixed the first time around.

Here’s how the food label can trip you up…and what a new, improved label might look like.

Michael F. Jacobson is executive director of the Center for Science in the Public Interest, publisher of Nutrition Action. Bruce Silverglade is CSPI’s director of legal affairs.

A food with 5 grams of saturated fat per serving shouldn’t be allowed to boast that it has 0 grams of trans fat.

The claim should reveal what percent of the grain is whole.

The label shouldn’t count polydextrose, maltodextrin, or similar isolated fibers as equal to the intact, natural fiber in whole grains, beans, or vegetables.

Any food that contains high-fructose corn syrup is not all natural.

If a food is made with coffee, caffeine, or guarana, the label should tell you how much caffeine is in a serving.

Some foods make an immunity claim because they contain a vitamin or two. That’s deceptive and shouldn’t be allowed.

When an ingredient appears on the label or in the food’s name, the label should reveal how much of the ingredient the food contains.

Many labels claim that a food or ingredient can “support,” “enhance,” or “maintain” your joints, bones, heart, breasts, prostate, digestive health, etc. Most claims aren’t backed by much evidence.

Nutrition facts are displayed.

This information isn't useful for most consumers.

The label should list only added sugars (from high-fructose corn syrup, table sugar, etc.), not the naturally occurring sugars in milk and fruit.

Caffeine content is disclosed.

Consumers can see that when all the cake's sugars are combined, they become the first ingredient.

Label should show percentages by weight of key ingredients, especially those that are good or bad for your health.

Bullets separate ingredients.

Minor ingredients and allergens are listed separately.

The “% Daily Amount” lets consumers know how much of a day’s worth of trans fat, added sugar, protein, etc., each serving contains.

Red color and “High” warn consumers when a serving has at least 20 percent of the Daily Amount for saturated fat, trans fat, cholesterol, sodium, or added sugars.

“Dietary fiber” should be called “Fiber” and should include only intact fiber from whole grains, beans, vegetables, fruit, and other foods. Polydextrose, maltodextrin, and similar carbohydrates should not count as fiber.

This information isn't useful for most consumers.

The Daily Amount for sodium should be 1,500 mg. The current 2,400 mg is too high.

When all the cake’s sugars are combined, they become the first ingredient.

Many people don’t realize that this is ordinary refined white flour.

All-capital letters are hard to read.

CALORIES AND SERVING SIZE SHOULD BE IN LARGER TYPE.

UNNECESSARY INFORMATION.

CALLING IT “% DAILY AMOUNT” WOULD BE MORE UNDERSTANDABLE.

THE DAILY AMOUNT FOR SODIUM SHOULD BE 1,500 MG. THE CURRENT 2,400 MG IS TOO HIGH.

WITH NO DAILY VALUE FOR TRANS FAT, ADDED SUGARS, OR PROTEIN, CONSUMERS DON’T KNOW HOW MUCH TO SHOOT FOR EACH DAY.

“A DIETARY FIBER” SHOULD BE CALLED “FIBER” AND SHOULD INCLUDE ONLY INTACT FIBER FROM WHOLE GRAINS, BEANS, VEGETABLES, FRUIT, AND OTHER FOODS. POLYDEXTROSE, MALTODEXTRIN, AND SIMILAR CARBOHYDRATES SHOULD NOT COUNT AS FIBER.

THIS INFORMATION ISN’T USEFUL FOR MOST CONSUMERS.

THE LABEL SHOULD LIST ONLY ADDED SUGARS (FROM HIGH-FRUCTOSE CORN SYRUP, TABLE SUGAR, ETC.), NOT THE NATURALLY OCCURRING SUGARS IN MILK AND FRUIT.

Many people don’t realize that this is ordinary refined white flour.

All-capital letters are hard to read.
